Dear friends and customers,

I am pleased to present my new catalogue. Most of my book stock was gathered in the last 20 years and contains many rare and seldom offered items. I hope you will find something of interest in this catalogue, otherwise I am in the position to search any book you find difficult to obtain. Please send me your want list. I am always interested in buying books, journals or even whole libraries on all fields of science (zoology, botany, geology, medicine, archaeology, physics etc.). Please offer me your duplicates.

Terms of sale and delivery:

We accept orders by mail, telephone, fax or e-mail. All items are offered subject to prior sale. Please do not forget to mention the unique item number when ordering books. Prices are in Euro. Postage, handling and bank costs are charged extra. We are required to charge our EU customers 6% VAT (TVA, BTW) unless they possess a VAT registration number and live outside of the Netherlands (please quote your VAT number when placing orders!). Books are sent by registered surface mail (unless we are instructed otherwise) upon receipt of payment. Confirmed orders are reserved for 30 days. If payment is not received within that period, we are in liberty to sell those items to other customers. If you pay by cheque we have to add € 10,- bank charges. Return policy: Books may be returned within 7 days, provided we are notified in advance and that the books are well packed and still in good condition. Full refund.

## Botany (Trees/Forrestry)

BT20850 **WEDDELL, H.-A., 1849.** €620,00

Histoire Naturelle des Quinquinas ou Monographie du Genre *Cinchona*, suivie d'une Description du Genre *Cascarella* et de quelques autres Plantes de la meme Tribu; [2], iv, [3], 108 p., 32 pls (numbered I-XXX + IIIbis & IV bis, 3 hand-coloured), 1 map, 1 frontispiece, folio, original printed boards (paper covering somewhat rubbed, blank piece missing of lower blank margin, and front cover spotted and waterstained). Some pages of the text with some slight foxing, and first half of text with a waterstain in lower blank margin, getting almost obsolete and unobtrusive in second half of the text. Plates with right margin waterstained but not or hardly affecting the figures, frontispiece has waterstains in lower left corner and left margin. A waterstained but complete copy of this rare and important description of the *Cinchona* plant from which Quinine was made for the treatment of malaria. Hugh (d')Algeron Weddell (1819-1877) travelled for six years in Peru, Paraguay and Bolivia, identifying fifteen different species of "fever-bark," from which quinine is obtained. The beautiful frontispiece depicts the quinine harvesting in the Valey of San Juan del Oro, in the Peruvian Carabaya forest. The three coloured plates (in which the waterstaining is less apparant) are very well executed and depict the barks of the different species of trees.

Some slight foxing on title-page and one or two text pages, otherwise text and plates exceptionally clean, binding tight. Small stamp with two gothic initials on title-page. Corners of boards a little worn. Bernhard Siegfried Albinus (1697-1770) was a German-born Dutch anatomist. He studied in Leiden in 1709, at the age of 12, having for his teachers such men as Boerhaave and Nikolaus Bidloo. Having finished his studies at Leiden, he went to Paris, where, under the instruction of Sebastien Vaillant, Jacob Winslow and others, he devoted himself especially to anatomy and botany. He later became professor in anatomy and surgery, and one of the most famous teachers of anatomy in Europe. The artist and engraver with whom Albinus did nearly all of his work was Jan Wandelaar (1690-1759). In an attempt to increase the scientific accuracy of anatomical illustration, Albinus and Wandelaar devised a new technique of placing nets with square webbing at specified intervals between the artist and the anatomical specimen and copying the images using the grid patterns.

**ZI00732 BARON, J., 1825 (1ST FRENCH ED.).** €480,00 [Picture on our website!](#)

Recherches, observations et expériences sur le développement naturel et artificiel des maladies tuberculeuses: suivies d'un nouvel examen des doctrines pathologiques sur la phthisie tuberculeuse, les concrétions hydateuses, les tumeurs serophuleuses, squirreuses, cancéreuses, etc; vii, 509, [1], 25, [2] p., 6 (5 col.) engraved pls, contemporary red half, spine gilt. First French edition, translated by V. Boivin who added 25 pages ('Additions à l'ouvrage précédent') at the end of the work.

One of three pathological works on tuberculosis written by the noted Gloucester physician John Baron. Baron believed that tubercles were "hydatids" become solid. Hydatids were then believed to be almost any kind of vesicle filled with fluid, even cysts of the ovary. In the course of his practice, Baron found (in post-mortem examinations) a good many cases of tubercle of the serous membranes which appeared to him to suit the 'hydatid' theory. He focussed on tubercles of a peculiar form. These were mostly suspended by a stalk, of 'a pearly hue and cartilaginous hardness', with numerous small blood-vessels converging to the apex of the tubercle and spreading in a plexus over its surface. His 'hydatid' theory is now completely discredited, but Baron's description of a variety of hanging tubercle in man, the same that has its proper habitat in the bovine species, is not likely to lose its interest.

Is er eenige grond, om daaraan een eigen leven toe te kennen? Wat is hiervan door voldoende proeven en waarnemingen duidelijk aangetoond? Wat daarentegen is, van hetgeen men daaromtrent gesteld heeft, nog voor twijfelachtig of ongegrond te houden? En welke nuttige leeringen kunnen er, uit hetgeen men daarvan waarlijk weet, worden afgeleid?; 113 p., new cloth (old marbled covers).

Marcello Malpighi (1628-94), Italian physician and anatomist, was professor of physic at Pisa, Bologna, and Messina, and was physician to Pope Innocent XII. Malpighi was the founder of histology and one of the greatest microscopists. In 1660 he was the first to see the capillary anastomosis between the arteries and the veins, thus helping the completion of Harvey's work on the circulation. He was a great embryologist; his name is perpetuated in "Malpighian bodies", "Malpighi's layer" of the epidermis, "Malpighi's (splenic) Corpuscles"» (Garrison & Morton, n. 66, p. 10).
