 Memoria sulla struttura geologica delle Alpi degli Apennini e dei Carpazi. Diretta specialmente a provare un passaggio dalle rocce secondarie all terziarie e lo sviluppo dei depositi eocenici nell'Europa Meridionale. Traduzione dall'Inglese ed appendice sulla Toscana. Firenze; xxxv, 528 p., 40 text engravings, two large, folded leaves with profiles, two large, folded tables, Large 8vo (23.2 x 15.5 cm). Later marbled boards, original printed front wrapper mounted on the front board.
 Rare expanded translation of an influential work by the Scottish geologist Roderick Impey Murchison (1792-1871), with a large addition dealing with the Italian mountains and in particular the Toscane region, written by his Italian colleagues Paolo Savi (1798-1871) and Guiseppe Menegheni (1811-1889). In the rear is a large section on the fossils of the Toscane region, including the descriptions of new species of ammonites, belemnites, and foraminifers (nummulites). Uncut. Some light, scattered spotting in the text, otherwise a very good, clean copy. Ward & Carozzi, 1625 [the much shorter original, German edition]
