Dear friends and customers,

I am pleased to present my new catalogue. Most of my book stock contains many rare and seldom offered items. I hope you will find something of interest in this catalogue, otherwise I am in the position to search any book you find difficult to obtain. Please send me your want list. I am always interested in buying books, journals or even whole libraries on all fields of science (zoology, botany, geology, medicine, archaeology, physics etc.). Please offer me your duplicates.

Terms of sale and delivery:

We accept orders by mail, telephone or e-mail. All items are offered subject to prior sale. Please do not forget to mention the unique item number when ordering books. Prices are in Euro. Postage, handling and bank costs are charged extra. Books are sent by surface mail (unless we are instructed otherwise) upon receipt of payment. Confirmed orders are reserved for 30 days. If payment is not received within that period, we are in liberty to sell those items to other customers. Return policy: Books may be returned within 14 days, provided we are notified in advance and that the books are well packed and still in good condition.

Marcello Malpighi (1628-94), Italian physician and anatomist, was professor of physic at Pisa, Bologna, and Messina, and was physician to Pope Innocent XII. Malpighi was the founder of histology and one of the greatest microscopists. In 1660 he was the first to see the capillary anastomosis between the arteries and the veins, thus helping the completion of Harvey's work on the circulation. He was a great embryologist; his name is perpetuated in "Malpighian bodies", "Malpighi's layer" of the epidermis, "Malpighi's (splenic) Corpuscles"» (Garrison & Morton, n. 66, p. 10).

This book discusses the circadian system properties and the control of secretion in reptilian salt glands. This book deals first with the central neural substrates for osmoregulation in the mammal; properties of the body fluids affecting basal salt gland secretion and urine formation in birds; properties of sleep-promoting factor S derived from human urine; and interrelation between sleep and temperature regulation. Other chapters present an introduction to hormonal and pharmacological aspects in exercise physiology, as well as the physiological responses during sustained isometric contractions. These topics are followed by a discussion on the mechanism of exercise, nutrition, and growth. The last chapters are devoted to the oxytocin influences on the central nervous system of healthy young men. These chapters also describe drug metabolism in athletes.

Avec une ébauche de l'Histoire des Êtres organisés avant leur fécondation par Jean Senebier, Ministre du Saint-Evangile, & Bibliothécaire de la République de Genève; xcvi, 413 p., 3 folded engraved plates, full contemporary marbled calf, spine gilt with five raised bands. Marbled endpapers. Edges red. Some wear on lower corners. A small waterstain on upper (blank) margin of part of the text and plates. Small previous owner's (De Millières) stamp on title-page (faint) and first page. A good, sound and tightly bound copy of this work which was published in three volumes. This third volume is complete in itself. It was also published separately and is treating only the reproduction of animals and plants.

Among the many dedicated natural philosophers of the eighteenth century, Spallanzani stands preeminent for applying bold and imaginative experimental methods to an extraordinary range of hypotheses and phenomena. His main scientific interests were biological and he acquired a mastery of microscopy. His use of microscopes enabled him to do the important discoveries in the field of reproduction as shown here in this book.
